

National Severe Weather Warning Service

Chief Forecasters Assessment

A rapidly deepening area of low pressure, named Storm Doris, is moving quickly east across the UK with strong winds on its southern and western flanks. Whilst there is confidence in the very windy spell, there is still some uncertainty about the track of Doris, and therefore the extent of the strongest winds.

The Met Office have issued a **Yellow Warning of Wind**

Valid from **06:30 on Thu, 23rd Feb 2017** until **20:00 on Thu, 23rd Feb 2017**

Some very strong winds are expected during Thursday in association with Storm Doris.

Gusts of 50-60 mph are expected widely across the warning area, with the risk of 70 mph on coasts and hills. A small swathe of even stronger winds is likely to develop - most likely across parts of northern England, Wales, the Midlands and later East Anglia. Here a short period of gusts of 70 to 80 mph is likely - please refer to the separate Amber warning.

Travel services could be affected including some restrictions on bridges and disruption to ferries. Some damage to trees and buildings is also possible.

This is an update to the warning to extend the area across the remainder Northern Ireland.
